D	<p>The regulation economics is an emerging interdisciplinary discipline. This course systematically discussed the basic problems of economics of regulation; it uses the analysis such as demand and supply, cost and benefit as tools, to control itself makes an economic analysis, and the research is focused on the economic regulation, social regulation and anti-monopoly regulation of the basic theory. In order to reflect the specific application of the theory of regulation economics in practice, this course also discusses the practical control problems of telecommunication, electric power, railway transportation, urban water and finance and so on.</p>
